

The READI Platform

By Readibots

An Identity Automation Platform with an Agile Identity Approach.

The READI platform is purpose-built to extend automation for identity with an Agile Identity (iterative) approach. The READI Platform provides organizations with the framework to automate identity tasks easily, iteratively, and with the skillset your team already possesses. Agile Identity is based on Agile Software Development and Project Management Principles, emphasizing rapid deployment, adaptability, and leveraging existing organizational resources. Readibots uses the READI Platform to develop core applications, and we make the READI Platform framework available to extend and enhance your current Identity Solutions and processes.

What makes the READI Platform different?

Readibots provides all the components needed for both simple and complex automation.

- Bot Studio uses the skillset your team already possesses: PowerShell. We turn your PowerShell scripts into **PowerShell for the Enterprise** by making them centralized, reusable, and governed. Your team is up and running quickly with little to no learning curve.
- Identity data is stored in the READI Platform, which can be extended to meet your needs, or data is retrieved on demand from any application or system when appropriate, giving you the best of both worlds. Having the right data at your fingertips is crucial to enforce policies and make decisions.
- Dynamic User Interface - The READI platform dynamically creates adaptive UIs that instantly provides the ability to accept input from the end user and use inside your BOT. You tell the BOT what data is needed and the user interface is generated automatically. The READI Platform provides the ability to create more sophisticated user interfaces including custom forms with options.
- REST enablement is available to every BOT. Your BOT automating critical tasks can now be called by other applications eliminating batch processes and human intervention.
- Credential Management is included to eliminate text-visible passwords, this is critical for every organization. BOTS can use credentials stored in our vault or a password vault of your choice.
- Bots can be delegated to people or processes. Bots are created and then sealed with our code-signing technology. BOTS can be delegated to team members for execution.
- Centralized Logging & Alerting captures every code change, execution, and outcome providing a necessary audit trail. You choose the alerting needed for each process.
- ROI metrics allow your organization to gain visibility into your automation savings. The metric calculation is configurable and tied to your real internal costs. These ROI metrics allow your executives to see the cost savings your team is providing and value Readibots is bringing to your organization.

Why the READI platform from Readibots is the best choice for identity automation.

No need to change your processes to get value.

Automate your process, don't change it. Take what you have and make it repeatable, reliable, and secure in no time. Becoming productive shouldn't start with making it worse.

Ditch the compiler. Rapidly build with low-code.

Extending the capabilities of an IGA or ITSM can be expensive and risky with Java and C-based code. Your IT gurus can easily create Bots with just a few commands using skills they already possess. We speak your language.

Connect to anything and everything without charge.

Connect to cloud, on-premise, and custom applications without worrying about utilization or per-connector costs.

Secure by design. Secure through use.

Protect your automation code from inception to execution, then let your new robotic workforce make changes in real time to ensure compliance and heightened security.

Come for Identity, stay for the platform.

Identity is everything, and everything starts with identity. But what about all the other things your people use and do? The READI platform is prepared to scale and automate your entire enterprise.

Make your Identity Management or Service Desk Solutions better. Readibots provides the automation you need.

The READI Architecture

Readibots is a **cloud-native true microservices SaaS** platform introducing no admin overhead when deploying new product updates. We take care of everything for you. Our architecture provides **infinite scalability** with global access. Built on the Microsoft Azure platform, the READI platform's **elastic architecture** allows you to automate any workload without limits. Readibots provides out-of-the-box connectivity to core systems, and on-prem agents allow us to easily ingest legacy application data/legacy systems.

The READI Architecture

**Automate any Identity task in your organization.
You're only limited to your imagination.**

We were amazed at how quickly we could automate our identity processes with Readibots."

— JP Calabio, Chief Information Security Officer, Alorica

Customers have built hundreds of automations to solve their unique business challenges in a very short timeframe. Alorica was in production within 45 days and experienced \$100K's in savings. They are not unique – all our customers have experienced the ability to rapidly create automations for their immediate issues and identify additional challenges in their organization to solve with Readibots automation.

About Readibots

Readibots is an industry leader in Agile Identity. Readibots changes the game from a traditional waterfall approach by building identity on an automation platform. Readibots allows organizations to focus on specific pain points with a start anywhere and go anywhere agile approach. Readibots has the tools to transform manual processes into efficient and secure automations. An enterprise-integrated solution delivered incrementally for maximum value.
