

Authomize and Readibots announce partnership to enhance customer Identity Security and Remediation capabilities

Ottawa, Ont. October 15, 2021 –Readibots, the creator of the READI platform, the first Automation-as-a-Service (AaaS) platform for advanced security remediation announced today a technology partnership with Authomize, the industry leader in Identity Threat Detection and Response (ITDR). Authomize allows organizations to quickly identify and continuously monitor user identities and authorizations across all services and applications. Authomize normalizes, correlates, and monitors the relationships between identities, assets, access privileges, and activities to ensure Least Privilege and to detect and eliminate identity-based threats.

Readibots provides an advanced security remediation platform as a service. With out-of-box workflows that engage the end-user in remediation, Readibots provides class-leading capabilities that dramatically reduce an enterprise's threat window. Wide scale system integration coupled with best-in-class flexibility results in the industry's smartest remediation playbooks. Whether it's time-based analysis or end-user interactions via SMS, incident responses get smarter and IT alert fatigue plummets.

Similar to credit card fraud alerting, Readibots can engage end-users and their management in the remediation process. With email, Microsoft Teams and SMS bi-directional communications, "Is this you?" type questions engage the affected user in the remediation workflows. These capabilities dramatically improve the accuracy of incident remediations. Readibots makes it simple to create individualized security responses that are unique to each company.

"When Authomize detects and alerts on an identity threat, it's important to ensure a rapid and effective response that aligns with existing security operations procedures. Our integration with Readibots extends our native response capabilities to allow customers best in class, custom security orchestration workflows" said Gal Diskin, Co-founder and CTO at Authomize.

"We are happy to be working with a security industry leader like Authomize. Authomize customers can take advantage of Readibots' smart remediation playbooks or can quickly create custom remediations using the READI SaaS platform" said Kevin Foisy, Readibots CEO and Founder.

About Readibots

Readibots is the creator of the READI platform, the first Automation-as-a-Service (AaaS) platform for Security Orchestration, Automation and Response (SOAR). The READI platform, connects with all of your systems, data and processes for fully automated security remediation. These are the bots that connect your dots! For more information on the READI Platform see <http://www.readibots.com>

About Authomize

Authomize protects organizations from identity-based cyberattacks with the first Identity Threat Detection and Response (ITDR) Platform. Authomize collects and normalizes data of identities, access privileges, assets, and activities from cloud services, applications, and IAM solutions in order to detect, investigate and respond to identity risks and threats. Customers use Authomize to gain visibility of actual access, achieve least privilege across cloud services and applications, secure their IAM infrastructure, and automate compliance and audit preparations. Learn more at www.authomize.com and follow us on [Twitter](#) and [LinkedIn](#) for news and updates.
