

FUN FACTS

RAPID, REPEATABLE, **READI™**

# READI Platform

Readibots for Enterprise-Wide Security Incident Remediation

---

## TOP 10 REASONS CISO'S CHOOSE READIBOTS

---

### Rock-Solid ROI

An incredibly strong ROI makes business justification simple. READI bots self-report on ROI. Hard numbers make for an easy business case. Typically organizations see a minimum of 5X return.

### Vendor Consolidation

Reduces need for point solutions. With rich services and integration across so many systems, there's no problem that can't be solved with the READI Platform

### Easy Acquisition

SaaS based, no infrastructure, low annual costs. Say goodbye to infrastructure like VM's, databases, web servers and say hello to easy automation, high performance, and no-code portals.

### Governance

Central management, delegation, zero-trust container execution, best in class code-signing and integrated auditing make for a secure and governed automation platform. Readibots helps organizations avoid the pitfalls of ad-hoc, unmanaged automations that have opened the door to countless security breaches.

### Skills Gap Eliminated

Leverage existing in-house skills. Each ops team can create playbooks on our platform using simple PowerShell they already know. No advanced knowledge or certifications required. Easy to create, and easy to maintain.

### Segregation of Duty

The READI Platform virtual tenant architecture allows an organization to delegate remediation playbook creation to the teams that are closest to the affected area, while maintaining central control, oversight and reporting.

4

## Insight and Oversight

With your SIEM, IAM or ITSM feeding events into Readibots, executive metrics on MTTR and incidents are calculated and available. Send summary reports to respective teams and executives on any interval. On the other end of the spectrum, detailed analysis of raw data like entitlements across hundreds of thousands of Sharepoint sites or OneDrives's becomes effortless.

## Multi-System Workflows

Easy integration with all of your systems, from SIEM, ITSM, IAM, HRMS, Infrastructure, Directories, Apps and beyond. One-click endpoints integrate bots for command and control, reporting, and service desk incident management across all leading applications and systems.

2

## Smarter Playbooks

Broad system integration, coupled with best-in-class flexibility, results in the industry's smartest remediation playbooks. Whether it's time based analysis or end-user interactions via SMS, your incident responses get smarter and your alert fatigue plummets.

## Reduced MTTR

Reduce response times while simultaneously reducing dependency on staff. Automating your incident response playbooks into a single platform, with team delegation across disciplines, results in threat windows being closed faster. Eliminate much of the Level 1 & 2 manual responses for faster remediation.

## Discover **readibots**

Designed by, and for IT engineers, the READI Platform is built for the challenges of the Enterprise. Perform any operation to any system, one-off or in thousands. Move or transform data, Identities, Groups and Entitlements. Control systems and their operations. Search and destroy data whether files, email, Sharepoint content.

Manage it, Delegate it, Report on it.
