

Bot Studio

By Readibots

Centralized. Reusable. Governed Automation.

Bot Studio allows you to automate tasks in your organization that you didn't think were possible, by extending your existing identity solutions or creating your own identity automation solutions.

With Bot Studio, you can automate edge use cases, interactive IT and help-desk tools, end-user self-service helpers, and manual repetitive tasks, and even assemble complete applications.

Bot Studio is a developer environment leveraging all the power of the READI Platform and providing an Agile Identity approach to solving business challenges. Agile Identity is based on Agile Software Development and Project Management Principles, emphasizing rapid deployment, adaptability, iterative development, and leveraging of existing organizational resources to deliver immediate ROI.

Bot Studio uses the skillset your team already possesses: PowerShell. That means your team is up and running quickly with no learning curve. We turn your Bots built with PowerShell into **PowerShell for the Enterprise** by making them **centralized, reusable, and governed**. The vast PowerShell community provides prebuilt scripts that can quickly be imported into the READI Platform and turned into Bots. You can also create your own Bots.

→ **The possibilities are endless.**

Automate challenging or edge use cases

Existing identity solutions are built for the masses and are typically unable to address challenges with complex or edge use cases without changing your existing processes. Readibots allows you to solve your business challenges without changing your process. You can easily solve the use cases below, and this is just the beginning.

Account Lockouts

Reduce the burden on your Help Desk and make life easier for your employees by providing the ability to automatically reset passwords with self-service, query the end-user for information, and automatically fulfill and close tickets with an audit trail.

Mergers & Acquisitions

Manage the challenges of mergers and acquisitions by having Readibots provide a single consolidated view of your identities, regardless of where the data resides.

Multi-Tenant Administration

Experience a single-pane-of-glass administration for your entire enterprise across all your tenants.

Ticket Fulfillment

Intercept repetitive and tedious tickets with automation, ticket commentary, and a full audit trail—all with no human intervention—allowing your team to focus on more complicated tasks.

Data Cleansing

Data inconsistencies is one of the top IGA blockers. Readibots corrects the data during the process ensuring smooth IGA deployments.

Event Triage

Eliminate the need for IT tickets by letting SIEM solutions and security events execute Bots through REST and executing workflows according to your existing playbooks/runbook. Bots create an audit trails, eliminating the need for IT tickets (although you can always log tickets for auditing).

Provisioning and Entitlements

Save time by using Bots to access applications and systems that are disconnected from existing IGA solutions. Bots automatically feed the data into your IGA solution, eliminating manual processes. Bots complete the round trip with requested updates to the originating system.

Bulk Operations

Ensure new attributes are added on time and accurately to users, and roles with synchronization across applications or systems. Bots do all of this and provide an audit trail.

Resource Cleanup

Let Readibots review your environment and identify identities (such as stale user accounts) not being used. Readibots will automatically move them to a new org or folder for archival and encryption, and/or disable the accounts. The choice is yours.

How It Works

The READI platform is the easiest way to automate your entire identity lifecycle. Whether your current identity program focuses on your IGA, ITSM, or a combination of the two, Readibots can propel you to real identity automation at least 10 times faster than either of them can alone. Heres how it works:

- 1**
Register your IGA/ITSM in the READI platform.
- 2**
Configure your IGA/ITSM to send /receive events.
- 3**
Forward events from your IGA, or tickets from your ITSM.
- 4**
Atomic TaskBots execute the task and verify completion.
- 5**
Readibots notifies the sender (IGA or ITSM) of completion.

The READI Platform centralizes and governs your Bots and turns them into reusable, repeatable components. Every Bot change is logged, and the execution is tracked with audit trails for oversight. The READI Platform core features bring the power to Bot Studio.

The READI Architecture

More information can be found in the [READI Platform Solution Overview](#).

Kansas University

Readibots is an amazing platform for our organization. We've been able to build many amazing solutions in quite a few different areas of IT. The folks at Readibots couldn't be greater to work with!"

— Andrew Jackson, IT Architect, KU

About Readibots

Readibots is an industry leader in Agile Identity. Readibots changes the game from a traditional waterfall approach by building identity on an automation platform. Readibots allows organizations to focus on specific pain points with a start anywhere and go anywhere agile approach. Readibots has the tools to transform manual processes into efficient and secure automations. An enterprise-integrated solution delivered incrementally for maximum value.
